ANALYSIS OF DISTRIBUTION MODEL FOR SPECIAL FUNDS OF NON REFORESTATION FUNDS FOR HEALTH IN 2005 FISCAL YEAR

Abstract. The difference in fiscal capacity among areas, frequently resulted in disparity of providing basic health care services. This study analysis the implementation of decree of Ministry Finance no 505/KMK.02/2004 as a model of allocating Special Allocated Funds of non Reforestation Funds (SAF non RF). This study aimed at finding out descriptions of variable association in the special allocated funds of non reforestation funds. This is a descriptive analytical study with quantitative and qualitative approaches. Data were analysed quantitavely by univariate, bivariate, multivariate analyses and were analysed qualitatively for its content. This study was conducted between March 2005 - July 2005 at the Ministry of Health, Ministry of Finance and other related institutions. This research involved: (1) samples of all regencies/towns received Special Allocated Funds of non Reforestation Funds i.e 434 regencies/towns in Indonesia, (2) 12 informants. The result showed that the significant variables are Fiscal Capacity, Area with Special Treatment, Access to Clean Water, and Availability of Health Service Facility. Simulation by replacing the age of life expectancy in infant death rate made this variable significant and explained Allocated Funds of non Reforestation Funds were bigger compared with original allocated funds. Simulation by weighing human resources in the variable of Availability of Health Facility made this variable significant.

Keywords : Special Allocated Funds, Non Reforestation Funds, Health Care Financing
